A GLIMPSE INTO THE FUTURE

ALPINE X

The opening of the world's highest 3S cable car to the Matterhorn glacier paradise in autumn 2018 was only the beginning of a much greater vision: the continuous aerial cable car connection between Zermatt and Italy, the so-called «Alpine X» (Crossing).

With the «Alpine X», an identical 3S cable car (three ropes) is under construction, connecting Testa Grigia and the Matterhorn glacier paradise. In autumn 2022, visitors will be able to tackle the highest cable car crossing in the Alps for the first time – always with the Matterhorn in sight.

This cable car connection from the Matterhorn glacier paradise (Klein Matterhorn) to Testa Grigia is making a generational dream come true: travelling from the Matterhorn village of Zermatt (CH) to Breuil-Cervina (IT), without getting your feet wet! The future-oriented cable car project will further enhance the attractiveness of our region, as well as strengthen Zermatt-Matterhorn as a top high alpine destination. The approximately one-hour panoramic journey from Switzerland to Italy or vice versa spans the highest altitude difference in Europe, with over 4'000 metres of difference in altitude.

MINERGIE-P

Since April 2009, the restaurant Matterhorn glacier paradise has been officially MINERGIE-P® certified and is therefore the building in the highest location with this certification.

GUARDING OUR ASSETS

The Zermatt Bergbahnen value the surrounding landscape and nature. Thus, their aim is the re-vegetation of impaired areas. For their efforts in the context of renaturation, the Zermatt Bergbahnen have been awarded the Revegetation Award.

RECYCLING

For several years now, the Zermatt Bergbahnen have been sending the cable car ropes, which have been discarded after the changeover, to Myanmar to the Swiss bridge builder Toni Rüttimann. He reuses the ropes by building suspension bridges, to provide access to cut-off villages.

FOREST & WILDLIFE CONSERVATION

Untouched snow slopes away from the marked slopes – a paradise for freeriders and at the same time a habitat for many wild animals. For this reason, their habitat is being secured by so-called wildlife & forest conservation zones and is being protected from excessive human disturbance.
